Legends

Table	Title	Legend and scope
Table S1	Curated PA-human interactome	Curated Pseudomonas aeruginosa protein-human protein interaction and functional-association records.
Table S2	ESM2 benchmarks	Protein-disjoint cross-validation, PA transfer and feature-ablation results.
Table S3	Hard-negative benchmark	Classifier performance against random, promiscuous-hub and partner-like negative sets.
Table S4	Leave-one-pathogen-out analysis	Pathogen-holdout transfer and negative-set resampling results.
Table S5	Cross-pathogen hub convergence	Degree-ranked host proteins, PA membership and source-stratified enrichment results.
Table S6	Three-pathogen human-lung response	Donor-level GSE192528 response estimates for PA, IAV and BCG.
Table S7	Mouse-human dual-evidence targets	Mouse and human transcript-level evidence for the selected host targets.
Table S8	Donor jackknife	Leave-one-donor-out sensitivity of human-lung expression estimates.
Table S9	Per-dataset TLR5 effects	Nine eligible meta-analysis datasets plus the descriptive iPSC-macrophage estimate. GSE97036 enters through six donor-level means.
Table S10	Mouse receptor/adaptor panel	Per-dataset receptor and adaptor transcript estimates.
Table S11	Descriptive single-cell TLR5 localization	Within-library mean log-normalized expression and detected fraction. Cells are not treated as biological replicates.
Table S12	Persistent-infection host response	Time-resolved GSE262433 host and bacterial measurements.
Table S13a	TLR5 meta-analysis input	Nine dataset-level TLR5 effects and standard errors used in the primary REML model.

Table	Title	Legend and scope
Table S13b	TLR5 meta-analysis summary	Primary REML result, Hartung-Knapp inference, prediction interval and prespecified sensitivity analyses.
Table S13c	TLR5 leave-one-dataset-out	Primary pooled estimate obtained after removing each dataset in turn.
Table S14a	Corrected receptor/adaptor panel meta-analysis	Thirteen-gene REML estimates after correction of the SRP and GSE97036 inputs, with BH-adjusted q values.
Table S14b	Receptor/adaptor study-level effects	Per-dataset effects underlying the corrected 13-gene panel.
Table S15	GSE192528 count model	Donor-blocked DESeq2 results for PA, IAV and BCG contrasts.
Table S16	WT-versus-deltaFliC equivalence analysis	Corrected residual degrees of freedom and TOST results at +/-0.5 and +/-1.0 log2FC margins.
Table S17	Network regression	Multivariable regression of PA-target status on cross-species degree, publication count and protein length.
Table S18	Single-cell descriptive summary	Descriptive pooled-library values used in place of cell-level OR inference.
Table S19	GSE201465 receptor/adaptor panel	Donor-paired receptor and adaptor estimates in the airway-organoid dataset.
Table S20a	Literature query counts	Reproducible PubMed query counts used for the literature audit.
Table S20b	Literature sentence audit	Sentence-level records retained from the literature audit.
Table S21a	GSE201465 disease-state strata	COPD and non-diseased donor subgroup estimates.
Table S21b	GSE201465 interaction test	Condition-by-disease-state interaction and multiple-testing correction.
Table S22a	GSE97036 design-rank check	The 48-sample design matrix and full-rank verification.
Table S22b	GSE97036 mixed-model effects	Model-based average PA-versus-control effects from the donor-random-intercept negative-binomial model.

Table	Title	Legend and scope
Table S22c	GSE97036 arsenic-by-infection test	Three-degree-of-freedom likelihood-ratio tests comparing the interaction and reduced models.
Table S22d	GSE97036 donor-level effects	Arsenic-level paired differences averaged within each donor; the six donor means are the independent biological units.
Table S22e	GSE97036 TLR5-minus-MUC1 contrast	Donor-level paired contrast between TLR5 and MUC1 changes.
Table S22f	GSE97036 donor-level correlations	Six-donor Spearman associations among TLR5, MUC1 and the inflammatory transcript axis.
Table S22g	GSE97036 donor-fixed sensitivity model	Average infection effects from the donor-fixed negative-binomial sensitivity model with 13 full-rank fixed-effect columns.
Table S23	TLR5-MUC1 figure source	Summary values used for the manuscript figure. The 24 repeated pairs are shown descriptively; intervals use the six donor means.

pmid	year	journal	title	sentence
42618450	2026	Gut	Intestinal flagellin drives multisystem inflammation through TLR5-IL-15-ARA axis.	Mechanistic studies in long covid demonstrated that flagellated bacteria activated toll-like receptor 5 (TLR5) on neutrophils, triggering the formation of neutrophil extracellular trap (NET) and IL-15 release.
42618450	2026	Gut	Intestinal flagellin drives multisystem inflammation through TLR5-IL-15-ARA axis.	CONCLUSIONS: We delineate a flagellin-TLR5-IL-15-ARA axis as a candidate mechanism driving systemic inflammation in long covid.
41512141	2026	Cancer Immunol Res	Pseudomonas aeruginosa Exacerbates Bladder Cancer Progression by Activating Cancer-Driven Immunosuppression.	aeruginosa activated Toll-like receptor 5 (TLR5) on bladder cancer cells, triggering phosphorylation of ERK1/2 and subsequent secretion of the chemokine CCL20.
41512141	2026	Cancer Immunol Res	Pseudomonas aeruginosa Exacerbates Bladder Cancer Progression by Activating Cancer-Driven Immunosuppression.	aeruginosa in promoting bladder cancer progression through TLR5-ERK1/2-CCL20-mediated MDSC recruitment, shedding light on the intricate interplay between microbial infection and cancer pathogenesis.
39991543	2025	iScience	Perturbation of EPHA2 and EFNA1 trans binding amplifies inflammatory response in airway epithelial cells.	Mechanistically, flagellin induces the TLR5-dependent EFNA1 cleavage through the metalloproteinase ADAM9 concomitant with the activation of ligand-independent EPHA2 signaling.
39978578	2025	Microbes Infect	Pseudomonas aeruginosa-derived DnaJ induces TLR2 expression through TLR10-mediated activation of the PI3K-SGK1 pathway in macrophages.	Our findings revealed that DnaJ significantly induced TLR2 expression in a dose- and time-dependent manner, predominantly affecting TLR2 with minimal impact on other TLRs, such as TLR4 and TLR5, which detect bacterial PAMPs.
39681187	2025	Microbes Infect	Endogenous retroelement expression in modeled airway epithelial repair.	Here, we investigate how ERE expression is sensitive to HAEC repair and toll-like receptor 5 (TLR5) activation, a primary mechanism by which inflammation impacts disease outcome.

pmid	year	journal	title	sentence
39681187	2025	Microbes Infect	Endogenous retroelement expression in modeled airway epithelial repair.	Our results demonstrate that several human endogenous retroviruses (HERVs) and long interspersed nuclear elements (LINEs) fluctuate throughout the various stages of repair and that TLR5 activation further influences ERE expression.
39591115	2024	Vaccines (Basel)	Differential Adjuvant Activity by Flagellins from Escherichia coli, Salmonella enterica Serotype Typhimurium, and Pseudomonas aeruginosa.	This study aims to analyze the amino acid sequences and structural features of flagellins from Escherichia coli (FliCE.C), Salmonella enterica serotype Typhimurium (FliCS.T), and Pseudomonas aeruginosa (FliCP.A), and to evaluate their adjuvant activities in terms of Toll-like receptor 5 (TLR5) activation, antibody production, and cytokine responses in a murine model.
39591115	2024	Vaccines (Basel)	Differential Adjuvant Activity by Flagellins from Escherichia coli, Salmonella enterica Serotype Typhimurium, and Pseudomonas aeruginosa.	Toll-like receptor 5 (TLR5) activation assays were performed to measure IL-8 and TNF-α production in vitro.
39591115	2024	Vaccines (Basel)	Differential Adjuvant Activity by Flagellins from Escherichia coli, Salmonella enterica Serotype Typhimurium, and Pseudomonas aeruginosa.	TLR5 activation assays showed that FliCS.T and FliCP.A induced higher levels of IL-8 and TNF-α production compared to FliCE.C, indicating species-specific variations in TLR5 activation.
38526073	2024	Antimicrob Agents Chemother	Preventive nasal administration of flagellin restores antimicrobial effect of gentamicin and protects against a multidrug-resistant strain of Pseudomonas aeruginosa.	Host-directed drugs, such as flagellin, an agonist of toll-like receptor 5 (TLR5), have emerged as a promising solution.
38513665	2024	Immunity	Epithelial-derived interleukin-23 promotes oral mucosal immunopathology.	Mechanistically, flagellated microbial species of the periodontitis microbiome triggered epithelial IL-23 induction in a TLR5 receptor-dependent manner.
37871855	2023	Microb Pathog	Therapeutic potential of Pseudomonas aeruginosa-mannose sensitive hemagglutinin (PA-MSHA) in cancer treatment.	Studies have revealed that PA-MSHA exhibits therapeutic potential against cancer growth by induction of apoptosis, arrest of cell cycle, activating NF-κB/TLR5 pathway, etc.

pmid	year	journal	title	sentence
36048544	2022	JCI Insight	CLEC5A is critical in Pseudomonas aeruginosa-induced NET formation and acute lung injury.	While pattern recognition receptors (PRRs) TLR4 and TLR5 are required for host defense against P.
35798038	2023	Anim Biosci	Effect of sweet potato purple acid phosphatase on Pseudomonas aeruginosa flagellin-mediated inflammatory response in A549 cells.	The activation of toll-like receptor 5 (TLR5) in TLR5-overexpressing HEK-293 cells exposed to PA FLA treated with or without sweet potato PAP was determined by the secreted alkaline phosphatase-based assay.
35798038	2023	Anim Biosci	Effect of sweet potato purple acid phosphatase on Pseudomonas aeruginosa flagellin-mediated inflammatory response in A549 cells.	The activation of TLR5 by PA-FLA was highest in TLR-overexpressing HEK293 cells at a substrate concentration of 5,000 ng/mL, whereas PA FLA treated with the enzyme strongly repressed the activation of TLR5.
35402623	2022	J Immunol Res	Isthmin 1 is Expressed by Progenitor-Like Cells in the Lung: Phenotypical Analysis of Isthmin 1+ Hematopoietic Stem-Like Cells in Homeostasis and during Infection.	We also observed that ISM1+ cells express TLR4, TLR5, and TLR9, and, in a mouse model of sepsis induced by P.
34985402	2022	Am J Respir Crit Care Med	Candidate Role for Toll-like Receptor 3 L412F Polymorphism and Infection in Acute Exacerbation of Idiopathic Pulmonary Fibrosis.	We established that 412F-heterozygous IPF lung fibroblasts have reduced antibacterial TLR responses to LPS (TLR4), Pam3CYSK4 (TLR1/2), flagellin (TLR5), and FSL-1 (TLR6/1) and have reduced responses to live Pseudomonas aeruginosa infection.
34666758	2021	Respir Res	Small-molecule Akt-activation in airway cells induces NO production and reduces IL-8 transcription through Nrf-2.	We examined the effects of SC79 on eNOS activation, NO production, Nrf-2 target levels, and interleukin-8 (IL-8) transcription during exposure to TNF-α or Pseudomonas flagellin (TLR5 agonist).
34102087	2021	Am J Respir Cell Mol Biol	Airway Administration of Flagellin Regulates the Inflammatory Response to Pseudomonas aeruginosa.	TLR5 (Toll-like receptor 5) stimulation by its specific ligand, the bacterial protein flagellin, has been proposed to enhance protection against several respiratory infectious diseases, although other cellular events, such as calcium signaling, may also control the intensity of the innate immune response.

pmid	year	journal	title	sentence
33894411	2021	Biochem Biophys Res Commun	Anesthetics isoflurane and sevoflurane attenuate flagellin-mediated inflammation in the lung.	Flagellin is a component of Gram negative bacteria and plays a significant role in the pathophysiology of bacterial pneumonia through its binding to Toll-like Receptor 5 (TLR5).
33894411	2021	Biochem Biophys Res Commun	Anesthetics isoflurane and sevoflurane attenuate flagellin-mediated inflammation in the lung.	Our results showed that VAs, not an intravenous anesthetic, significantly attenuated the activation of TLR5 and the release of the neutrophil chemoattractant IL-8 from lung epithelial cells.
33894411	2021	Biochem Biophys Res Commun	Anesthetics isoflurane and sevoflurane attenuate flagellin-mediated inflammation in the lung.	To understand the interaction between VAs and TLR5, a docking simulation was performed, which indicated that isoflurane and sevoflurane docked into the binding interphase between TLR5 and flagellin.
33841424	2021	Front Immunol	Flagellin From Pseudomonas Aeruginosa Stimulates ATB0,+ Transporter for Arginine and Neutral Amino Acids in Human Airway Epithelial Cells.	At the molecular level, these effects were directly referable to the stimulation of a toll-like receptor-5 (TLR5) signaling pathway and to the induction of nuclear factor-κB (NF-κB) transcription factor.
33250899	2020	Front Immunol	Early Cytokine Induction Upon Pseudomonas aeruginosa Infection in Murine Precision Cut Lung Slices Depends on Sensing of Bacterial Viability.	aeruginosa is assessed in PCLS by TLR5-independent sensing of flagellin and recognition of the type three secretion system.
33031374	2020	PLoS One	Toll like Receptor signalling by Prevotella histicola activates alternative NF-κB signalling in Cystic Fibrosis bronchial epithelial cells compared to P. aeruginosa.	TLR5 signalling was responsible for the induction of the alternative NF-kB pathway through phosphorylation of IKKα.
32423093	2020	Microorganisms	Multidrug-Resistant Pseudomonas aeruginosa Evokes Differential Inflammatory Responses in Human Microglial and Retinal Pigment Epithelial Cells.	Significant differences were observed in expression levels of Toll-like receptors (TLR) TLR4, TLR5, and TLR9 in microglia cells challenged with MDR-PA vs.
31337721	2019	mBio	Pseudomonas aeruginosa Regulatory Protein AnvM Controls Pathogenicity in Anaerobic Environments and Impacts Host Defense.	We also found that AnvM directly interacted with host receptors Toll-like receptor 2 (TLR2) and TLR5, which might lead to activation of the host immune response.

pmid	year	journal	title	sentence
31337721	2019	mBio	Pseudomonas aeruginosa Regulatory Protein AnvM Controls Pathogenicity in Anaerobic Environments and Impacts Host Defense.	More importantly, AnvM directly bound to TLR2 and TLR5, which turn on the host immune response.
31214180	2019	Front Immunol	Human Toll-like Receptor 8 (TLR8) Is an Important Sensor of Pyogenic Bacteria, and Is Attenuated by Cell Surface TLR Signaling.	Signaling via TLR2, TLR4, or TLR5, but not TLR8, rapidly eliminated IRAK-1 detection by immunoblotting due to IRAK-1 modifications during activation.
31133714	2019	Sci Rep	Bacterial flagellin promotes viral entry via an NF-kB and Toll Like Receptor 5 dependent pathway.	Studies determined that the bacterial antigen responsible for this pro-viral activity was the Toll-Like Receptor 5 (TLR5) agonist flagellin.
31133714	2019	Sci Rep	Bacterial flagellin promotes viral entry via an NF-kB and Toll Like Receptor 5 dependent pathway.	Exposure to flagellin increased virus attachment to epithelial cells in a temperature-dependent manner via TLR5-dependent activation of NF-KB.
30936684	2019	Drug Des Devel Ther	Mechanistic research holds promise for bacterial vaccines and phage therapies for Pseudomonas aeruginosa.	Recombinant flagella and pili that target TLR5 have been utilized to combat P.
30473791	2018	Basic Clin Androl	Effects of lipopolysaccharide-induced inflammation on hypoxia and inflammatory gene expression pathways of the rat testis.	One gene (Tlr5) was down-regulated after 3 h and no genes at 6 h.
30109945	2018	Am J Respir Cell Mol Biol	The Neutrophilic Response to Pseudomonas Damages the Airway Barrier, Promoting Infection by Klebsiella pneumoniae.	aeruginosa activation of Toll-like receptor 5, results in prolonged neutrophil recruitment to the lung and increased levels of neutrophil elastase in the airway, resulting in lung damage and epithelial barrier dysfunction.
30109945	2018	Am J Respir Cell Mol Biol	The Neutrophilic Response to Pseudomonas Damages the Airway Barrier, Promoting Infection by Klebsiella pneumoniae.	Prophylaxis with an anti-Toll-like receptor 5 antibody or Sivelestat, a neutrophil elastase inhibitor, reduced neutrophil influx, inflammation, and mortality.
30070169	2018	Virulence	Pseudomonas aeruginosa flagellum is critical for invasion, cutaneous persistence and induction of inflammatory response of skin epidermis.	This pro-inflammatory effect was significantly reduced in keratinocytes infected in presence of anti-toll-like receptor 5 (TLR5) neutralizing antibody.
30070169	2018	Virulence	Pseudomonas aeruginosa flagellum is critical for invasion, cutaneous persistence and induction of inflammatory response of skin epidermis.	aeruginosa is mainly sensed by TLR5 during the early innate immune response of human primary keratinocytes.

pmid	year	journal	title	sentence
29589550	2018	Endocr Metab Immune Disord Drug Targets	The Effect of Denatured Flagellin on Toll-Like Receptor-5 (TLR-5) in Mice.	BACKGROUND: Previous studies have demonstrated that flagellin, a component of bacterial flagella, engages Toll-Like receptor 5 (TLR-5) causing the activation of the Myeloid Differentiation Factor-88 (MYD-88) pathway that leads to the production of pro-inflammatory cytokines including Tumor Necrosis Factor-alpha (TNF-α) and Interleukin-12 (IL-12).
29589550	2018	Endocr Metab Immune Disord Drug Targets	The Effect of Denatured Flagellin on Toll-Like Receptor-5 (TLR-5) in Mice.	CONCLUSION: Denatured flagellin suppressed the production of the pro-inflammatory cytokines induced by intact flagellin or Pseudomonas aeruginosa both in vitro and in vivo, probably by blocking TLR5.
29186029	2017	J Clin Med	MUC1: The First Respiratory Mucin with an Anti-Inflammatory Function.	MUC1 expression was initially shown to interfere with TLR5 signaling in response to P.
29062042	2017	Sci Rep	Contributions of MyD88-dependent receptors and CD11c-positive cells to corneal epithelial barrier function against Pseudomonas aeruginosa.	Uninjured IL-1R (-/-) or TLR4 (-/-) corneas, but not TLR2 (-/-), TLR5 (-/-), TLR7 (-/-), or TLR9 (-/-), were more susceptible to P.
29062042	2017	Sci Rep	Contributions of MyD88-dependent receptors and CD11c-positive cells to corneal epithelial barrier function against Pseudomonas aeruginosa.	Bacteria adherent to the corneas of IL-1R (-/-) or TLR5 (-/-) mice penetrated beyond the epithelial surface only if the cornea was superficially-injured.
29062042	2017	Sci Rep	Contributions of MyD88-dependent receptors and CD11c-positive cells to corneal epithelial barrier function against Pseudomonas aeruginosa.	These data show complex roles for TLR4, TLR5, IL-1R and CD11c+ cells in constitutive epithelial barrier function against P.
28656134	2017	ERJ Open Res	Corticosteroid-resistant inflammatory signalling in Pseudomonas-infected bronchial cells.	aeruginosa activates NF-κB via Toll-like receptor (TLR) 2, which acts in an additive manner to TLR5 to drive inflammation in airway epithelial cells.
28489911	2017	PLoS One	Human β-defensin-2 production upon viral and bacterial co-infection is attenuated in COPD.	The effects of Pseudomonas aeruginosa were mediated via interactions of flagellin with TLR5.

pmid	year	journal	title	sentence
28479111	2017	Immunol Lett	Co-utilization of a TLR5 agonist and nano-formulation of HIV-1 vaccine candidate leads to increased vaccine immunogenicity and decreased immunogenic dose: A preliminary study.	In the present study, FLiC (flagellin molecule sequence from Pseudomonas aeruginosa) was used as a TLR5 agonist.
28479111	2017	Immunol Lett	Co-utilization of a TLR5 agonist and nano-formulation of HIV-1 vaccine candidate leads to increased vaccine immunogenicity and decreased immunogenic dose: A preliminary study.	Our results showed that Co-utilization of TLR5 and nano-particles not only improves vaccine immunogenicity but also decreases the immunogenic dose of vaccine candidate required.
28479111	2017	Immunol Lett	Co-utilization of a TLR5 agonist and nano-formulation of HIV-1 vaccine candidate leads to increased vaccine immunogenicity and decreased immunogenic dose: A preliminary study.	We showed that the immune system was effectively stimulated via the nano-vaccination strategy using the TLR5 agonists.
28469996	2017	Front Cell Infect Microbiol	Signaling Mediated by Toll-Like Receptor 5 Sensing of Pseudomonas aeruginosa Flagellin Influences IL-1β and IL-18 Production by Primary Fibroblasts Derived from the Human Cornea.	We also investigated the signaling pathways in hCFs mediated by Toll-Like Receptor (TLR)4 and TLR5 sensing of P.
28469996	2017	Front Cell Infect Microbiol	Signaling Mediated by Toll-Like Receptor 5 Sensing of Pseudomonas aeruginosa Flagellin Influences IL-1β and IL-18 Production by Primary Fibroblasts Derived from the Human Cornea.	aeruginosa, and our data show that the signal triggered by TLR5-flagellin sensing significantly contributed to IL-1β and IL-18 cytokine production in our model.
28469996	2017	Front Cell Infect Microbiol	Signaling Mediated by Toll-Like Receptor 5 Sensing of Pseudomonas aeruginosa Flagellin Influences IL-1β and IL-18 Production by Primary Fibroblasts Derived from the Human Cornea.	Our study suggests that IL-18 expression is wholly dependent on extracellular flagellin sensing by TLR5, whereas IL-1β expression is also influenced by P.
28467446	2017	PLoS One	The anti-microbial peptide TP359 attenuates inflammation in human lung cells infected with Pseudomonas aeruginosa via TLR5 and MAPK pathways.	Blocking of TLR5, the putative flagellin receptor, completely abrogated the capacity of infected lung cells to secrete cytokines, underscoring that TP359 regulates inflammation via the TLR5-dependent signaling pathway.
27855208	2016	PLoS Pathog	Swimming Motility Mediates the Formation of Neutrophil Extracellular Traps Induced by Flagellated Pseudomonas aeruginosa.	aeruginosa-induced NET formation is independent of the flagellum-sensing receptors TLR5 and NLRC4 in both human and mouse neutrophils.

pmid	year	journal	title	sentence
27554297	2017	Mucosal Immunol	Neutrophil pyroptosis mediates pathology of P. aeruginosa lung infection in the absence of the NADPH oxidase NOX2.	We also demonstrate that PAO1-induced pyroptosis depended on NLRC4 and Toll-like receptor 5 (TLR5) in neutrophils generated from Nlrc4-/- or Tlr5-/- mice.
27513608	2017	Exp Dermatol	The role of RNase 7 in innate cutaneous defense against Pseudomonas aeruginosa.	Blockade of Toll-like receptor 5 (TLR5), a pattern recognition receptor (PRR) known to be activated by P.
27288486	2016	Am J Physiol Lung Cell Mol Physiol	Lung epithelial MyD88 drives early pulmonary clearance of Pseudomonas aeruginosa by a flagellin dependent mechanism.	Mice deficient for MyD88 in lung epithelial cells (Sftpccre-MyD88-lox mice) or myeloid cells (LysMcre-MyD88-lox mice) and bone marrow chimeric mice deficient for TLR5 (the receptor recognizing Pseudomonas flagellin) in either parenchymal or hematopoietic cells were infected with P.
27288486	2016	Am J Physiol Lung Cell Mol Physiol	Lung epithelial MyD88 drives early pulmonary clearance of Pseudomonas aeruginosa by a flagellin dependent mechanism.	The immune-enhancing role of epithelial MyD88 was dependent on recognition of pathogen-derived flagellin by epithelial TLR5, as demonstrated by an unaltered clearance of mutant P.
27288486	2016	Am J Physiol Lung Cell Mol Physiol	Lung epithelial MyD88 drives early pulmonary clearance of Pseudomonas aeruginosa by a flagellin dependent mechanism.	aeruginosa lacking flagellin from the lungs of Sftpccre-MyD88-lox mice and an impaired bacterial clearance in bone marrow chimeric mice lacking TLR5 in parenchymal cells.
27288486	2016	Am J Physiol Lung Cell Mol Physiol	Lung epithelial MyD88 drives early pulmonary clearance of Pseudomonas aeruginosa by a flagellin dependent mechanism.	aeruginosa from the airways is dependent on flagellin-TLR5-MyD88-dependent signaling in respiratory epithelial cells.
26950764	2016	J Innate Immun	CXCR1 Regulates Pulmonary Anti-Pseudomonas Host Defense.	Mechanistically, CXCR1 regulates anti-Pseudomonas neutrophil responses through modulation of reactive oxygen species and interference with Toll-like receptor 5 expression.
26793709	2015	Front Cell Dev Biol	The TAK1→IKKβ→TPL2→MKK1/MKK2 Signaling Cascade Regulates IL-33 Expression in Cystic Fibrosis Airway Epithelial Cells Following Infection by Pseudomonas aeruginosa.	We found that, in CF AECs expressing a deletion of a phenylalanine at position 508 of the gene coding for Cystic Fibrosis Transmembrane Conductance Regulator (CFTRdelF508), exposure to live Pseudomonas aeruginosa upregulates IL-33 via the TLR2 and TLR5 signaling pathways.

pmid	year	journal	title	sentence
26645913	2016	Inflamm Res	Pseudomonas aeruginosa stimulates tyrosine phosphorylation of and TLR5 association with the MUC1 cytoplasmic tail through EGFR activation.	Here, we elucidate the mechanism through which the MUC1 cytoplasmic tail (CT) inhibits TLR5 signaling in response to Pa and its flagellin in primary normal human bronchial epithelial (NHBE) cells.
26645913	2016	Inflamm Res	Pseudomonas aeruginosa stimulates tyrosine phosphorylation of and TLR5 association with the MUC1 cytoplasmic tail through EGFR activation.	NHBE cells were stimulated with Pa and MUC1-CT/TLR5 and MUC1-CT/EGFR association were detected by co-immunoprecipitation.
26645913	2016	Inflamm Res	Pseudomonas aeruginosa stimulates tyrosine phosphorylation of and TLR5 association with the MUC1 cytoplasmic tail through EGFR activation.	Stimulation of NHBE cells with recombinant TNF-α increased both MUC1 and EGFR protein levels, and stimulation of these cells with Pa enhanced MUC1-CT tyrosine phosphorylation and increased MUC1-CT/TLR5 and MUC1-CT/EGFR protein association, in an EGFR-dependent manner.
26645913	2016	Inflamm Res	Pseudomonas aeruginosa stimulates tyrosine phosphorylation of and TLR5 association with the MUC1 cytoplasmic tail through EGFR activation.	CONCLUSIONS: These results indicate that in response to Pa or flagellin, EGFR associates with and tyrosine phosphorylates MUC1-CT in primary NHBE cells, leading to increased MUC1-CT association with TLR5.
26645913	2016	Inflamm Res	Pseudomonas aeruginosa stimulates tyrosine phosphorylation of and TLR5 association with the MUC1 cytoplasmic tail through EGFR activation.	Based on prior studies in tumor cells, increased MUC1-CT/TLR5 association in NHBE cells is predicted to competitively inhibit Pa/flagellin-stimulated TLR5 activation, reduce TLR5-dependent cell signaling, and down-regulate airway inflammation.
26500187	2016	Exp Eye Res	Protective efficacy of a peptide derived from a potential adhesin of Pseudomonas aeruginosa against corneal infection.	Peptide Pc-EP could directly bind to HCEC, stronger than Pc-E, and specifically activate toll-like receptor 5, and thereby significantly induce the production of pro-inflammatory factors, such as IL-1β, IL-6, IFN-γ and IL-17.
26360879	2015	PLoS One	Staphylococcus aureus Inhibits IL-8 Responses Induced by Pseudomonas aeruginosa in Airway Epithelial Cells.	Similarly SAF decreased IL-8 production induced by the TLR1/TLR2 ligand Pam3CysSK4 but not the TLR4 ligand LPS nor TLR5 ligand flagellin in Beas-2B cells.

pmid	year	journal	title	sentence
25458314	2015	Mol Immunol	Phenylbutyrate induces cathelicidin expression via the vitamin D receptor: Linkage to inflammatory and growth factor cytokines pathways.	Furthermore, we demonstrate that PBA enhances Toll-Like Receptor 5 ligand flagellin regulated mRNA expression of the inflammatory cytokine TNFα and chemokine CXCL8.
25402425	2015	J Innate Immun	Redundant and cooperative interactions between TLR5 and NLRC4 in protective lung mucosal immunity against Pseudomonas aeruginosa.	This protein has been shown to activate the Toll-like receptor TLR5 and the Nod-like receptor Nlrc4/Ipaf, culminating in the expression of innate cytokines and antimicrobial molecules.
25402425	2015	J Innate Immun	Redundant and cooperative interactions between TLR5 and NLRC4 in protective lung mucosal immunity against Pseudomonas aeruginosa.	In this study, we tested the hypothesis that TLR5 and Nlrc4 in combination are required for maximal protective lung innate mucosal immunity against PA.
25402425	2015	J Innate Immun	Redundant and cooperative interactions between TLR5 and NLRC4 in protective lung mucosal immunity against Pseudomonas aeruginosa.	To test this hypothesis, we compared innate immune responses in wild-type (WT) C57B6 mice challenged with PA intratracheally to those observed in mice genetically deficient in TLR5 (TLR5(-/-)) or Nlrc4 (Nlrc4(-/-)) alone or in combination (TLR5/Nlrc4(-/-)).
25402425	2015	J Innate Immun	Redundant and cooperative interactions between TLR5 and NLRC4 in protective lung mucosal immunity against Pseudomonas aeruginosa.	As compared to WT, TLR5(-/-) and Nlrc4(-/-) mice, we observed a significant increase in mortality in TLR5/Nlrc4(-/-) mice, which was associated with a >5,000-fold increase in lung PA colony-forming units and systemic bacterial dissemination.
25402425	2015	J Innate Immun	Redundant and cooperative interactions between TLR5 and NLRC4 in protective lung mucosal immunity against Pseudomonas aeruginosa.	Levels of biologically active IL-1β and IL-18 were reduced in the bronchoalveolar lavage fluid from PA-infected Nlrc4(-/-) and TLR5/Nlrc4(-/-) but not TLR5(-/-) mice, indicating the requirement for Nlrc4-dependent caspase-1 activation.
25402425	2015	J Innate Immun	Redundant and cooperative interactions between TLR5 and NLRC4 in protective lung mucosal immunity against Pseudomonas aeruginosa.	Similarly, decreased production of biologically active IL-1β and activation of caspase-1 was observed in PA-stimulated pulmonary macrophages isolated from Nlrc4(-/-) and TLR5/Nlrc4(-/-) but not TLR5(-/-) mice, whereas the expression of iNOS and the production of NO were significantly reduced in cells from double-mutant but not single-mutant mice.

pmid	year	journal	title	sentence
25402425	2015	J Innate Immun	Redundant and cooperative interactions between TLR5 and NLRC4 in protective lung mucosal immunity against Pseudomonas aeruginosa.	Collectively, our findings indicate that TLR5 and Nlrc4 have both unique and redundant roles in lung antibacterial mucosal immunity, and the absence of both pathogen recognition receptors results in an increase in susceptibility to invasive lung infection.
24909229	2014	BMC Pulm Med	Flagellin concentrations in expectorations from cystic fibrosis patients.	Thus, attempts to down regulate inflammation by the use of TLR5 (flagellin receptor) antagonists remain a possibility.
24637756	2014	Acta Crystallogr F Struct Biol Commun	Purification, crystallization and X-ray crystallographic studies of flagellin from Pseudomonas aeruginosa.	Upon bacterial invasion into a host, flagellin functions as a pathogen-associated molecular pattern that is recognized by immune receptors, such as Toll-like receptor 5 (TLR5) and NAIP5/NLRC4, and activates host innate immunity against pathogens.
24637756	2014	Acta Crystallogr F Struct Biol Commun	Purification, crystallization and X-ray crystallographic studies of flagellin from Pseudomonas aeruginosa.	Future structure-based functional studies of paflagellin would extend the knowledge of the TLR5 or NAIP5/NLRC4 activation mechanisms of flagellin and would make a significant contribution to the design of flagellin vaccines and antiradiation therapeutics.
24595157	2014	PLoS One	Toll-like receptor 9 deficiency protects mice against Pseudomonas aeruginosa lung infection.	While a number of studies have demonstrated the roles of TLR2, TLR4 and TLR5 in host defense againt P.
24454904	2014	PLoS One	Flagellin treatment prevents increased susceptibility to systemic bacterial infection after injury by inhibiting anti-inflammatory IL-10+ IL-12- neutrophil polarization.	Administration of a TLR5 agonist, flagellin, after burn injury restored the neutrophil response towards a N1 phenotype resulting in an increased clearance of wildtype P.
24434155	2014	Biochem Biophys Res Commun	Crystal structure of FliC flagellin from Pseudomonas aeruginosa and its implication in TLR5 binding and formation of the flagellar filament.	paFliC activates innate immune responses via its recognition by Toll-like receptor 5 (TLR5) and adaptive immunity in the host.
24434155	2014	Biochem Biophys Res Commun	Crystal structure of FliC flagellin from Pseudomonas aeruginosa and its implication in TLR5 binding and formation of the flagellar filament.	As observed for Salmonella FliC, the paFliC D1 domain is folded into a rod-shaped structure, and paFliC was demonstrated by gel filtration and native PAGE analyses to directly interact with TLR5.

pmid	year	journal	title	sentence
24434155	2014	Biochem Biophys Res Commun	Crystal structure of FliC flagellin from Pseudomonas aeruginosa and its implication in TLR5 binding and formation of the flagellar filament.	Moreover, a structural model of the paFliC-TLR5 complex suggests that paFliC D1 would provide major TLR5-binding sites, similar to Salmonella FliC.
24434155	2014	Biochem Biophys Res Commun	Crystal structure of FliC flagellin from Pseudomonas aeruginosa and its implication in TLR5 binding and formation of the flagellar filament.	Our biophysical and structure-based modeling study on paFliC, the paFliC-TLR5 complex, and the paFliC filament could contribute to the improvement of vaccine design to control P.
24312669	2013	PLoS One	Surfactant protein A binds flagellin enhancing phagocytosis and IL-1β production.	Historically flagella stimulate IL-1β production through the toll-like receptor 5 (TLR-5) pathway and through a caspase-1 activating inflammasome pathway.
24097563	2013	Am J Physiol Lung Cell Mol Physiol	Flagellin/TLR5 signaling potentiates airway serous secretion from swine tracheal submucosal glands.	Here, we focused on whether TLR5 ligand flagellin, which is one of the components of Pseudomonas aeruginosa, is involved in the upregulation of airway serous secretion.
24097563	2013	Am J Physiol Lung Cell Mol Physiol	Flagellin/TLR5 signaling potentiates airway serous secretion from swine tracheal submucosal glands.	These potentiating effects were TLR5 dependent but TLR4 independent.
24097563	2013	Am J Physiol Lung Cell Mol Physiol	Flagellin/TLR5 signaling potentiates airway serous secretion from swine tracheal submucosal glands.	Furthermore, TLR5 was abundantly expressed on tracheal submucosal glands.
24097563	2013	Am J Physiol Lung Cell Mol Physiol	Flagellin/TLR5 signaling potentiates airway serous secretion from swine tracheal submucosal glands.	Flagellin/TLR5 signaling further accelerated the intracellular NO synthesis induced by ACh.
24097563	2013	Am J Physiol Lung Cell Mol Physiol	Flagellin/TLR5 signaling potentiates airway serous secretion from swine tracheal submucosal glands.	These findings suggest that TLR5 takes part in the airway mucosal defense systems as a unique endogenous potentiator of airway serous secretions and that NO/cGMP/cGK signaling is involved in this rapid potentiation by TLR5 signaling.
23994582	2013	Hum Immunol	Genetic variations in toll-like receptor pathway and lung function decline in Cystic fibrosis patients.	Patients homozygous for variant C allele of TLR5 polymorphism rs5744174 are more frequently associated with extreme fast FEV1 decline (OR: 20 (95% Confidence Interval:1.85-216.18)).

pmid	year	journal	title	sentence
23994582	2013	Hum Immunol	Genetic variations in toll-like receptor pathway and lung function decline in Cystic fibrosis patients.	Our findings indicate that variations in TLR1, TLR2 and TLR5 genes may influence CF lung function decline.
23750216	2013	PLoS One	Host response and bacterial virulence factor expression in Pseudomonas aeruginosa and Streptococcus pneumoniae corneal ulcers.	We found that neutrophils comprised >90% cells in corneal ulcers, and that there was elevated expression of TLR2, TLR4, TLR5 and TLR9, the NLRP3 and NLRC4 inflammasomes and the ASC adaptor molecule.
23626014	2013	J Immunol	Mammalian target of rapamycin regulates IL-10 and resistance to Pseudomonas aeruginosa corneal infection.	mTOR inhibition also altered genes related to TLR signaling, including elevation of TLR4, TLR5, and IL-1R1, with decreases in IL-1R-associated kinase 1 and an inhibitor of NF-κB, NF-κB inhibitor-like 1.
23527288	2013	PLoS One	Epithelial uptake of flagella initiates proinflammatory signaling.	Flagella-dependent signaling required dynamin-based uptake as well as TLR5 and primarily led to the induction of proinflammatory (Tnf, Il6) as well as neutrophil (Cxcl1, Cxcl2, Ccl3) and macrophage (Ccl20) chemokines.
23527104	2013	PLoS One	The protein kinase TPL2 is essential for ERK1/ERK2 activation and cytokine gene expression in airway epithelial cells exposed to pathogen-associated molecular patterns (PAMPs).	aeruginosa and TLR2, TLR3 and TLR5 ligands activates ERK1/ERK2 via the protein kinase TPL2 and not the growth factor receptor EGFR.
23340821	2013	Mucosal Immunol	Genome-wide transcriptional analysis of differentially expressed genes in flagellin-pretreated mouse corneal epithelial cells in response to Pseudomonas aeruginosa: involvement of S100A8/A9.	We previously showed that pre-exposure of the cornea to Toll-like receptor 5 ligand flagellin induces profound mucosal innate protection against infections by modifying gene expression.
23277486	2013	J Immunol	Flagellin induces myeloid-derived suppressor cells: implications for Pseudomonas aeruginosa infection in cystic fibrosis lung disease.	aeruginosa bacteria, and 3) corresponded to TLR5 expression on MDSCs in vitro and in vivo.
23068105	2012	Biochem Biophys Res Commun	Mucoid Pseudomonas aeruginosa caused by mucA mutations result in activation of TLR2 in addition to TLR5 in airway epithelial cells.	However, while the non-mucoid strain PAO1 activates p38α MAPK pathway solely via TLR5, the mucoid strain PACF508 activates p38α MAPK via both TLR5 and TLR2.

pmid	year	journal	title	sentence
23068105	2012	Biochem Biophys Res Commun	Mucoid Pseudomonas aeruginosa caused by mucA mutations result in activation of TLR2 in addition to TLR5 in airway epithelial cells.	Inactivation of mucA (the gene responsible for the mucoid phenotype) in PAO1 leads to p38α MAPK activation by both TLR2 and TLR5, as observed in the clinical mucoid isolate PACF508.
23068105	2012	Biochem Biophys Res Commun	Mucoid Pseudomonas aeruginosa caused by mucA mutations result in activation of TLR2 in addition to TLR5 in airway epithelial cells.	Therefore, the switch to mucoid phenotype may contribute to more inflammation via TLR2 activation in addition to TLR5.
22782952	2012	J Infect Dis	Toll-like receptor 2 deficiency increases resistance to Pseudomonas aeruginosa pneumonia in the setting of sepsis-induced immune dysfunction.	We sought to establish the role of TLR2, TLR4, and TLR5 in postseptic mice with Pseudomonas aeruginosa pneumonia.
22782952	2012	J Infect Dis	Toll-like receptor 2 deficiency increases resistance to Pseudomonas aeruginosa pneumonia in the setting of sepsis-induced immune dysfunction.	Wild-type, tlr2(-/-), tlr4(-/-), tlr5(-/-), tlr2 4(-/-) mice that underwent CLP were secondarily subjected to P.
22782952	2012	J Infect Dis	Toll-like receptor 2 deficiency increases resistance to Pseudomonas aeruginosa pneumonia in the setting of sepsis-induced immune dysfunction.	RESULTS: Postseptic wild-type and tlr4(-/-) and tlr5(-/-) mice displayed high susceptibility to P.
22768318	2012	PLoS One	A crucial role of Flagellin in the induction of airway mucus production by Pseudomonas aeruginosa.	Silencing of TLR5 and Naip, siRNA inhibited both flagellin-induced MUC5AC expression and IL-8 secretion.
22768318	2012	PLoS One	A crucial role of Flagellin in the induction of airway mucus production by Pseudomonas aeruginosa.	aeruginosa-induced mucus hyper-secretion through TLR5 and Naip pathways; (ii) this process is mediated by ERK and amplified by IL-8.
22735982	2012	Curr Microbiol	Regulation on expression of toll-like receptors on monocytes after stimulation with the 3-o-C12-HSL molecule from Pseudomonas aeruginosa.	Monocytes were cultured with 3-o-C12-HSL at different concentrations (0, 10, 25, 50, and 100 μmol/L) for 12 h; upon exposure to 3-o-C12-HSL, IL-12 production in monocytes was inhibited, monocyte proliferation was blocked, TLR2- and 4-mRNA expressions were reduced, and TLR5-mRNA expression was increased in a dose-dependent manner.

pmid	year	journal	title	sentence
22735982	2012	Curr Microbiol	Regulation on expression of toll-like receptors on monocytes after stimulation with the 3-o-C12-HSL molecule from Pseudomonas aeruginosa.	Interestingly, though TLR2- and 4-protein levels were reduced, TLR5 protein expression was not changed.
22307620	2012	Proc Natl Acad Sci U S A	Toll-like receptor 5 (TLR5), IL-1β secretion, and asparagine endopeptidase are critical factors for alveolar macrophage phagocytosis and bacterial killing.	Here, we report that TLR5 engagement is crucial for bacterial clearance by AMs in vitro and in vivo because unflagellated P.
22307620	2012	Proc Natl Acad Sci U S A	Toll-like receptor 5 (TLR5), IL-1β secretion, and asparagine endopeptidase are critical factors for alveolar macrophage phagocytosis and bacterial killing.	aeruginosa or different mutants defective in TLR5 activation were resistant to AM phagocytosis and killing.
22307620	2012	Proc Natl Acad Sci U S A	Toll-like receptor 5 (TLR5), IL-1β secretion, and asparagine endopeptidase are critical factors for alveolar macrophage phagocytosis and bacterial killing.	aeruginosa strain) by primary AMs was causally associated with increased IL-1β release, which was dramatically reduced with PAK mutants or in WT PAK-infected primary TLR5(-/-) AMs, demonstrating the dependence of IL-1β production on TLR5.
22307620	2012	Proc Natl Acad Sci U S A	Toll-like receptor 5 (TLR5), IL-1β secretion, and asparagine endopeptidase are critical factors for alveolar macrophage phagocytosis and bacterial killing.	Altogether, these findings demonstrate that TLR5 engagement plays a major role in P.
22250084	2012	J Immunol	Membrane-tethered MUC1 mucin is phosphorylated by epidermal growth factor receptor in airway epithelial cells and associates with TLR5 to inhibit recruitment of MyD88.	In this article, we elucidate the mechanism by which MUC1 inhibits TLR5 signaling.
22250084	2012	J Immunol	Membrane-tethered MUC1 mucin is phosphorylated by epidermal growth factor receptor in airway epithelial cells and associates with TLR5 to inhibit recruitment of MyD88.	Overexpression of MyD88 abrogated the ability of MUC1 to inhibit NF-κB activation, and MUC1 overexpression inhibited flagellin-induced association of TLR5/MyD88 compared with controls.
22250084	2012	J Immunol	Membrane-tethered MUC1 mucin is phosphorylated by epidermal growth factor receptor in airway epithelial cells and associates with TLR5 to inhibit recruitment of MyD88.	The MUC1 cytoplasmic tail associated with TLR5 in all cells tested, including HEK293T cells, human lung adenocarcinoma cell line A549 cells, and human and mouse primary airway epithelial cells.

pmid	year	journal	title	sentence
22250084	2012	J Immunol	Membrane-tethered MUC1 mucin is phosphorylated by epidermal growth factor receptor in airway epithelial cells and associates with TLR5 to inhibit recruitment of MyD88.	Activation of epidermal growth factor receptor tyrosine kinase with TGF-α induced phosphorylation of the MUC1 cytoplasmic tail at the Y46EKV sequence and increased association of MUC1/TLR5.
22250084	2012	J Immunol	Membrane-tethered MUC1 mucin is phosphorylated by epidermal growth factor receptor in airway epithelial cells and associates with TLR5 to inhibit recruitment of MyD88.	Finally, in vivo experiments demonstrated increased immunofluorescence colocalization of Muc1/TLR5 and Muc1/phosphotyrosine staining patterns in mouse airway epithelium and increased Muc1 tyrosine phosphorylation in mouse lung homogenates following P.
22250084	2012	J Immunol	Membrane-tethered MUC1 mucin is phosphorylated by epidermal growth factor receptor in airway epithelial cells and associates with TLR5 to inhibit recruitment of MyD88.	In conclusion, epidermal growth factor receptor tyrosine phosphorylates MUC1, leading to an increase in its association with TLR5, thereby competitively and reversibly inhibiting recruitment of MyD88 to TLR5 and downstream signaling events.
22250084	2012	J Immunol	Membrane-tethered MUC1 mucin is phosphorylated by epidermal growth factor receptor in airway epithelial cells and associates with TLR5 to inhibit recruitment of MyD88.	This unique ability of MUC1 to control TLR5 signaling suggests its potential role in the pathogenesis of chronic inflammatory lung diseases.
22227411	2012	Exp Cell Res	Flagellin/TLR5 responses induce mucus hypersecretion by activating EGFR via an epithelial cell signaling cascades.	aeruginosa up-regulated MUC5AC expression by activating its receptor Toll-like receptor 5 (TLR5) in 16HBE cells.
22154939	2012	J Mol Biol	Inhibition of Pseudomonas aeruginosa virulence: characterization of the AprA-AprI interface and species selectivity.	AprA cleaves one of the key microbial recognition molecules, monomeric flagellin, and thereby diminishes Toll-like receptor 5 activation.
21901099	2011	PLoS Pathog	Pseudomonas evades immune recognition of flagellin in both mammals and plants.	Recognition of flagellin monomers occurs by flagellin-specific pattern-recognition receptors, such as Toll-like receptor 5 (TLR5) in mammals and flagellin-sensitive 2 (FLS2) in plants.

pmid	year	journal	title	sentence
21901099	2011	PLoS Pathog	Pseudomonas evades immune recognition of flagellin in both mammals and plants.	In our search for Toll like receptor (TLR) antagonists, we screened bacterial supernatants and identified alkaline protease (AprA) of Pseudomonas aeruginosa as a TLR5 signaling inhibitor as evidenced by a marked reduction in IL-8 production and NF-κB activation.
21901099	2011	PLoS Pathog	Pseudomonas evades immune recognition of flagellin in both mammals and plants.	AprA effectively degrades the TLR5 ligand monomeric flagellin, while polymeric flagellin (involved in bacterial motility) and TLR5 itself resist degradation.
21901099	2011	PLoS Pathog	Pseudomonas evades immune recognition of flagellin in both mammals and plants.	aeruginosa aprA mutants induced an over 100-fold enhanced activation of TLR5 signaling, because they fail to degrade excess monomeric flagellin in their environment.
21901099	2011	PLoS Pathog	Pseudomonas evades immune recognition of flagellin in both mammals and plants.	Thus, by degrading the ligand for TLR5 and FLS2, P.
21628521	2011	Infect Immun	Efficacy of a conjugate vaccine containing polymannuronic acid and flagellin against experimental Pseudomonas aeruginosa lung infection in mice.	Importantly, the PMA-FLA conjugate vaccine did not elicit antibodies that neutralized the Toll-like receptor 5 (TLR5)-activating activity of flagellin, an important part of innate immunity to flagellated microbial pathogens.
21572023	2011	J Immunol	Airway epithelial MyD88 restores control of Pseudomonas aeruginosa murine infection via an IL-1-dependent pathway.	However, mice in which multiple TLR pathways (e.g., TLR2/TLR4/TLR5) are blocked are not as compromised in their response to P.
21310913	2011	Invest Ophthalmol Vis Sci	Topical flagellin-mediated innate defense against Candida albicans keratitis.	PURPOSE: This study was conducted to investigate whether flagellin, the sole ligand of Toll-like receptor-5 (TLR5), induces an innate defense that is sufficient to protect injured corneas from Candida albicans.
21310913	2011	Invest Ophthalmol Vis Sci	Topical flagellin-mediated innate defense against Candida albicans keratitis.	METHODS: Scarified corneas of adult B6, TLR5(-/-), Camp(-/-) (cathelicidin-related antimicrobial peptide), or PMN-depleted mice were pretreated with Pseudomonas aeruginosa flagellin or a mutant and then were inoculated with C.

pmid	year	journal	title	sentence
21310913	2011	Invest Ophthalmol Vis Sci	Topical flagellin-mediated innate defense against Candida albicans keratitis.	RESULTS: Topical application of flagellin induced profound protection against Candida keratitis in a TLR5-dependent manner.
21195713	2011	Exp Eye Res	Toll-like receptor activation modulates antimicrobial peptide expression by ocular surface cells.	TLR2 was not detected in corneal fibroblasts, TLR4 was not detected in primary cultured or freshly isolated HCEC, TLR5 was not detected in conjunctival epithelial cells (IOBA-NHC) and corneal fibroblasts, TLR7 was not detected in freshly isolated HCEC and TLR10 was not detected in HCEC and IOBA-NHC.
21195713	2011	Exp Eye Res	Toll-like receptor activation modulates antimicrobial peptide expression by ocular surface cells.	Immunostaining of cadaver corneas revealed TLR5 and 9 expression throughout the cornea while TLR3 was significantly expressed only in the epithelium.
21195713	2011	Exp Eye Res	Toll-like receptor activation modulates antimicrobial peptide expression by ocular surface cells.	TLR agonists did not modulate TLR expression itself, however, LL-37 or hBD-2 downregulated TLR5, 7 and/or 9 mRNA depending on the cell type.
21176887	2011	J Cyst Fibros	P. aeruginosa drives CXCL8 synthesis via redundant toll-like receptors and NADPH oxidase in CFTRΔF508 airway epithelial cells.	Moreover, in CFTRΔF508 AECs, TLR2, TLR4 and TLR5 act redundantly to drive CXCL8 synthesis via the activation of NADPH oxidase.
21068401	2010	J Immunol	TLR5 as an anti-inflammatory target and modifier gene in cystic fibrosis.	By combining cellular immunology with a population-based genetic modifier study, we examined TLR5 as an anti-inflammatory target and modifier gene in CF.
21068401	2010	J Immunol	TLR5 as an anti-inflammatory target and modifier gene in cystic fibrosis.	Using two pairs of human CF and control airway epithelial cells, we demonstrated that the TLR5-flagellin interaction is a major mediator of inflammation following exposure to Pseudomonas aeruginosa.
21068401	2010	J Immunol	TLR5 as an anti-inflammatory target and modifier gene in cystic fibrosis.	To validate TLR5 as an anti-inflammatory target, we analyzed the disease modifying effects of the TLR5 c.1174C>T single nucleotide polymorphism (rs5744168) in a large cohort of CF patients (n = 2219).

pmid	year	journal	title	sentence
21068401	2010	J Immunol	TLR5 as an anti-inflammatory target and modifier gene in cystic fibrosis.	To test the hypothesis that reduced TLR5 responsiveness would be associated with improved health in CF patients, we examined the relationship between rs5744168 and two clinical phenotypes: lung function and body weight.
21068401	2010	J Immunol	TLR5 as an anti-inflammatory target and modifier gene in cystic fibrosis.	Adults with CF carrying the TLR5 premature stop codon (CT or TT genotype) had a higher body mass index than did CF patients homozygous for the fully functional allele (CC genotype) (p = 0.044); however, similar improvements in lung function associated with the T allele were not statistically significant.
21068401	2010	J Immunol	TLR5 as an anti-inflammatory target and modifier gene in cystic fibrosis.	Although follow-up studies are needed to confirm the impact of TLR5 on nutritional status, this translational research provides evidence that genetic variation in TLR5 resulting in reduced flagellin responsiveness is associated with improved health indicators in adults with CF.
20826748	2010	J Immunol	TLR4 and TLR5 on corneal macrophages regulate Pseudomonas aeruginosa keratitis by signaling through MyD88-dependent and -independent pathways.	aeruginosa parent and ΔfliC (aflagellar) strains 19660 and PAO1, we found that F4/80(+) macrophages were the predominant cell type in the cornea expressing TLR2, TLR4, and TLR5.
20730374	2010	Braz J Med Biol Res	Human monocytes tolerant to LPS retain the ability to phagocytose bacteria and generate reactive oxygen species.	aureus, but not with flagellin (a TLR5 agonist).
20601077	2010	Microbes Infect	Topical flagellin protects the injured corneas from Pseudomonas aeruginosa infection.	Using a mouse model of Pseudomonas keratitis, we evaluated the protective effects of topical application of flagellin, a ligand for Toll-Like receptor 5 (TLR5), on the development of Pseudomonas keratitis and elucidated the underlying mechanisms.
20566829	2010	J Immunol	Flagellin stimulates protective lung mucosal immunity: role of cathelicidin-related antimicrobial peptide.	In this study, we evaluated the effect of the TLR5 ligand flagellin on stimulation of antibacterial mucosal immunity in a lethal murine Pseudomonas aeruginosa pneumonia model.

pmid	year	journal	title	sentence
20566829	2010	J Immunol	Flagellin stimulates protective lung mucosal immunity: role of cathelicidin-related antimicrobial peptide.	The protective effects of flagellin on survival required TLR5 and were observed even in the absence of neutrophils.
20460375	2010	J Biol Chem	Loss of cystic fibrosis transmembrane conductance regulator function enhances activation of p38 and ERK MAPKs, increasing interleukin-6 synthesis in airway epithelial cells exposed to Pseudomonas aeruginosa.	Moreover, although TLR5 contributes to p38 MAPK activation upon P.
20195469	2010	PLoS One	Flagellin-induced corneal antimicrobial peptide production and wound repair involve a novel NF-kappaB-independent and EGFR-dependent pathway.	L94A (a site mutation in TLR5 binding region) flagellin and PAK expressing L94A flagellin were unable to stimulate NF-kappaB activation, but were potent in eliciting EGFR signaling in a TGF-alpha-related pathway in HCECs.
19995892	2010	Infect Immun	Evaluation of flagella and flagellin of Pseudomonas aeruginosa as vaccines.	Antibodies to flagella delay onset of infection in CF patients, but whether immunity to polymeric flagella and that to monomeric flagellin are comparable has not been addressed, nor has the question of whether such antibodies might negatively impact Toll-like receptor 5 (TLR5) activation, an important component of innate immunity to P.
19995892	2010	Infect Immun	Evaluation of flagella and flagellin of Pseudomonas aeruginosa as vaccines.	Purified flagellin was a more potent activator of TLR5 than were flagella and also elicited higher TLR5-neutralizing antibodies than did immunization with flagella.
19995892	2010	Infect Immun	Evaluation of flagella and flagellin of Pseudomonas aeruginosa as vaccines.	Antibody to type a but not type b flagella or flagellin inhibited TLR5 activation by whole bacterial cells.
19995892	2010	Infect Immun	Evaluation of flagella and flagellin of Pseudomonas aeruginosa as vaccines.	aeruginosa, and flagellin monomers might induce antibodies capable of neutralizing innate immunity due to TLR5 activation, but solid immunity to P.
19806220	2009	PLoS One	Pseudomonas aeruginosa LPS or flagellin are sufficient to activate TLR-dependent signaling in murine alveolar macrophages and airway epithelial cells.	TLR2,4/LPS and TLR5/flagellin.

pmid	year	journal	title	sentence
19801452	2009	Am J Physiol Lung Cell Mol Physiol	Role of Toll-like receptor 5 in the innate immune response to acute P. aeruginosa pneumonia.	The contribution of Toll-like receptor 5 (TLR5) to the innate immune response to this organism is incompletely understood.
19801452	2009	Am J Physiol Lung Cell Mol Physiol	Role of Toll-like receptor 5 in the innate immune response to acute P. aeruginosa pneumonia.	We exposed wild-type and TLR5-deficient (Tlr5(-/-)) mice to aerosolized P.
19801452	2009	Am J Physiol Lung Cell Mol Physiol	Role of Toll-like receptor 5 in the innate immune response to acute P. aeruginosa pneumonia.	Bacterial clearance was impaired in Tlr5(-/-) mice after low-inoculum, but not high-inoculum, infection.
19801452	2009	Am J Physiol Lung Cell Mol Physiol	Role of Toll-like receptor 5 in the innate immune response to acute P. aeruginosa pneumonia.	Early bronchoalveolar accumulation of neutrophils was reduced in Tlr5(-/-) mice after low- and high-dose infection.
19801452	2009	Am J Physiol Lung Cell Mol Physiol	Role of Toll-like receptor 5 in the innate immune response to acute P. aeruginosa pneumonia.	Cytokine responses, including markedly impaired monocyte chemoattractant protein-1 production 4 h after low- and high-inoculum challenge, were selectively altered in Tlr5(-/-) mice.
19801452	2009	Am J Physiol Lung Cell Mol Physiol	Role of Toll-like receptor 5 in the innate immune response to acute P. aeruginosa pneumonia.	In contrast, there was no impairment of bacterial clearance, neutrophil recruitment, or monocyte chemoattractant protein-1 production in Tlr5(-/-) mice after infection with a nonflagellated isotypic strain of P.
19801452	2009	Am J Physiol Lung Cell Mol Physiol	Role of Toll-like receptor 5 in the innate immune response to acute P. aeruginosa pneumonia.	Thus TLR5-mediated recognition of flagellin is involved in activating pulmonary defenses against P.
19801452	2009	Am J Physiol Lung Cell Mol Physiol	Role of Toll-like receptor 5 in the innate immune response to acute P. aeruginosa pneumonia.	These data are the first to demonstrate a unique role for TLR5 in the innate immune response to P.
18936773	2009	Immunol Cell Biol	Lack of MD-2 expression in human corneal epithelial cells is an underlying mechanism of lipopolysaccharide (LPS) unresponsiveness.	A cell surface biotinylation assay revealed that HUCL cells express TLR4 intracellularly, whereas TLR5 is expressed on the cell surface.
18684966	2008	J Immunol	TLR expression on neutrophils at the pulmonary site of infection: TLR1/TLR2-mediated up-regulation of TLR5 expression in cystic fibrosis lung disease.	TLR2, TLR4, TLR5, and TLR9 expression was increased on airway neutrophils compared with circulating neutrophils in CF and bronchiectasis patients.

pmid	year	journal	title	sentence
18684966	2008	J Immunol	TLR expression on neutrophils at the pulmonary site of infection: TLR1/TLR2-mediated up-regulation of TLR5 expression in cystic fibrosis lung disease.	On airway neutrophils, TLR5 was the only TLR that was significantly higher expressed in CF patients compared with bronchiectasis patients and healthy controls.
18684966	2008	J Immunol	TLR expression on neutrophils at the pulmonary site of infection: TLR1/TLR2-mediated up-regulation of TLR5 expression in cystic fibrosis lung disease.	Studies using confocal microscopy and flow cytometry revealed that TLR5 was stored intracellularly in neutrophils and was mobilized to the cell surface in a protein synthesis-independent manner through protein kinase C activation or after stimulation with TLR ligands and cytokines characteristic of the CF airway microenvironment.
18684966	2008	J Immunol	TLR expression on neutrophils at the pulmonary site of infection: TLR1/TLR2-mediated up-regulation of TLR5 expression in cystic fibrosis lung disease.	The most potent stimulator of TLR5 expression was the bacterial lipoprotein Pam(3)CSK(4).
18684966	2008	J Immunol	TLR expression on neutrophils at the pulmonary site of infection: TLR1/TLR2-mediated up-regulation of TLR5 expression in cystic fibrosis lung disease.	TLR5 activation enhanced the phagocytic capacity and the respiratory burst activity of neutrophils, which was mediated, at least partially, via a stimulation of IL-8 production and CXCR1 signaling.
18684966	2008	J Immunol	TLR expression on neutrophils at the pulmonary site of infection: TLR1/TLR2-mediated up-regulation of TLR5 expression in cystic fibrosis lung disease.	This study demonstrates a novel mechanism of TLR regulation in neutrophils and suggests a critical role for TLR5 in neutrophil-P.
18682396	2008	J Biol Chem	Redox-independent activation of NF-kappaB by Pseudomonas aeruginosa pyocyanin in a cystic fibrosis airway epithelial cell line.	100 microm PYO on its own had no effect or only small effects to activate NF-kappaB (<1.5-fold), but PYO synergized with the TLR5 agonist flagellin.
18566425	2008	J Immunol	Control of Pseudomonas aeruginosa in the lung requires the recognition of either lipopolysaccharide or flagellin.	We conclude that the interactions of either TLR4 with LPS or TLR5 with flagellin can effectively defend the lung from P.
18490781	2008	J Immunol	Innate immunity mediated by TLR5 as a novel antiinflammatory target for cystic fibrosis lung disease.	The goal of this study was to establish whether TLR5 signaling is the key molecular pathway mediating lung inflammation in CF, and to determine whether strategies to inhibit TLR5 can reduce the damaging inflammatory response.

pmid	year	journal	title	sentence
18490781	2008	J Immunol	Innate immunity mediated by TLR5 as a novel antiinflammatory target for cystic fibrosis lung disease.	Additionally, 151 clinical isolates of Pseudomonas aeruginosa from CF patients were assessed for motility and capacity to activate TLR5.
18490781	2008	J Immunol	Innate immunity mediated by TLR5 as a novel antiinflammatory target for cystic fibrosis lung disease.	Using complementary approaches involving both neutralizing Ab targeting TLR5 and flagellin-deficient bacteria, we established that inhibition of TLR5 abolished the damaging inflammatory response generated by CF airway cells following exposure to P.
18490781	2008	J Immunol	Innate immunity mediated by TLR5 as a novel antiinflammatory target for cystic fibrosis lung disease.	The potential therapeutic value of TLR5 inhibition was further supported by our demonstration that 75% of clinical isolates of P.
18490781	2008	J Immunol	Innate immunity mediated by TLR5 as a novel antiinflammatory target for cystic fibrosis lung disease.	aeruginosa retained TLR5 activating capacity during chronic CF lung infection.
18490781	2008	J Immunol	Innate immunity mediated by TLR5 as a novel antiinflammatory target for cystic fibrosis lung disease.	These studies identify the innate immune receptor TLR5 as a novel antiinflammatory target for reducing damaging lung inflammation in CF.
18211936	2008	Br J Ophthalmol	Human conjunctival epithelial cells express functional Toll-like receptor 5.	PURPOSE: The expression and function of Toll-like receptor 5 (TLR5) was analysed in human conjunctival epithelial cells (HCjEC).
18211936	2008	Br J Ophthalmol	Human conjunctival epithelial cells express functional Toll-like receptor 5.	METHODS: The expression of TLR5 in HCjEC was studied by reverse transcriptase (RT) PCR and flow cytometry.
18211936	2008	Br J Ophthalmol	Human conjunctival epithelial cells express functional Toll-like receptor 5.	The localisation of TLR5 protein in human conjunctival epithelium was detected immunohistochemically.
18211936	2008	Br J Ophthalmol	Human conjunctival epithelial cells express functional Toll-like receptor 5.	RESULTS: HCjEC expressed TLR5-specific mRNA and TLR5 protein.
18211936	2008	Br J Ophthalmol	Human conjunctival epithelial cells express functional Toll-like receptor 5.	TLR5 protein was detected on the basolateral but not the apical side of human conjunctival epithelium.
18211936	2008	Br J Ophthalmol	Human conjunctival epithelial cells express functional Toll-like receptor 5.	CONCLUSIONS: Human conjunctival epithelium harbours functional TLR5.

pmid	year	journal	title	sentence
18211936	2008	Br J Ophthalmol	Human conjunctival epithelial cells express functional Toll-like receptor 5.	Considering the spatially selective basolateral localisation of TLR5 protein, it was postulated that flagellins from ocular pathogenic bacteria induce inflammatory responses when disruption of the epithelial barrier permits their transmigration to the basolateral side but not under healthy physiological conditions on the ocular surface.
17935074	2007	Eur J Immunol	Critical role for Ipaf in Pseudomonas aeruginosa-induced caspase-1 activation.	Further analysis showed that bacterial flagellin was essential for caspase-1 and IL-1beta and this activity depended on Ipaf and the adaptor ASC but not TLR5.
17935074	2007	Eur J Immunol	Critical role for Ipaf in Pseudomonas aeruginosa-induced caspase-1 activation.	Analysis of Pseudomonas mutants revealed that different amino acid residues of flagellin were critical for sensing by Ipaf and TLR5.
17935074	2007	Eur J Immunol	Critical role for Ipaf in Pseudomonas aeruginosa-induced caspase-1 activation.	aeruginosa with host macrophages and suggest that distinct regions of flagellin are sensed by Ipaf and TLR5.
17908812	2007	Infect Immun	The p38 mitogen-activated protein kinase signaling pathway is coupled to Toll-like receptor 5 to mediate gene regulation in response to Pseudomonas aeruginosa infection in human airway epithelial cells.	The presence of Toll-like receptor 5 (TLR5) in 293 cells mediated PAO1-dependent activation of p38 MAPK, and in HAECs p38 MAPK activation was blocked by the overexpression of a dominant negative TLR5.
17908812	2007	Infect Immun	The p38 mitogen-activated protein kinase signaling pathway is coupled to Toll-like receptor 5 to mediate gene regulation in response to Pseudomonas aeruginosa infection in human airway epithelial cells.	aeruginosa via TLR5.
17898290	2007	Invest Ophthalmol Vis Sci	Modulation of corneal epithelial innate immune response to pseudomonas infection by flagellin pretreatment.	The activation of p38 and JNK and the cellular expression of TLR5 were determined by Western blot analysis.
17898290	2007	Invest Ophthalmol Vis Sci	Modulation of corneal epithelial innate immune response to pseudomonas infection by flagellin pretreatment.	Cell surface distribution of TLR5 was assessed by flow cytometry.
17898290	2007	Invest Ophthalmol Vis Sci	Modulation of corneal epithelial innate immune response to pseudomonas infection by flagellin pretreatment.	Flagellin-induced tolerance did not alter the cellular level and surface distribution of TLR5.

pmid	year	journal	title	sentence
17617608	2007	J Immunol	Blocking of the TLR5 activation domain hampers protective potential of flagellin DNA vaccine.	Flagellin is an attractive vaccine candidate because it is readily produced and manipulated as a recombinant protein and has intrinsic adjuvant activity mediated through TLR5.
17617608	2007	J Immunol	Blocking of the TLR5 activation domain hampers protective potential of flagellin DNA vaccine.	Although DNA vaccines encoding native Pseudomonas B-type (FliC) or A-type (FlaA) flagellin are strongly immunogenic, the resultant Ab response interferes with the interaction of homologous flagellin with TLR5.
17617608	2007	J Immunol	Blocking of the TLR5 activation domain hampers protective potential of flagellin DNA vaccine.	The mutant Ag encoded by this vaccine was highly immunogenic, but its ability to interact with TLR5 was reduced by >100-fold.
17617608	2007	J Immunol	Blocking of the TLR5 activation domain hampers protective potential of flagellin DNA vaccine.	Vaccination with this flagellin mutant DNA vaccine induced cross-reactive Abs against both FliC and FlaA, but few Abs capable of interfering with TLR5 activation.
17617608	2007	J Immunol	Blocking of the TLR5 activation domain hampers protective potential of flagellin DNA vaccine.	These findings suggest that vaccines against flagellated pathogens should avoid inducing Abs against TLR5 and raise the possibility that flagellated bacteria evade host elimination by facilitating the production of Abs that reduce the host's ability to mount an innate immune response.
17570117	2007	J Infect Dis	The role of flagellin versus motility in acute lung disease caused by Pseudomonas aeruginosa.	Next, we found that the absence of the Toll-like receptor 5 (TLR5) ligand, flagellin, results in slower clearance of this organism from the lungs and a delay in the time to death.
17283089	2007	Infect Immun	Resistance to Pseudomonas aeruginosa chronic lung infection requires cystic fibrosis transmembrane conductance regulator-modulated interleukin-1 (IL-1) release and signaling through the IL-1 receptor.	We found neither Toll-like receptor 2 (TLR2) nor TLR4 nor TLR5 were required for this response.
17238927	2007	Mol Microbiol	Genetic mechanisms involved in the repression of flagellar assembly by Pseudomonas aeruginosa in human mucus.	This response possibly abrogates the potent inflammatory response mediated by the interaction of flagellin with Toll-like receptor 5.

pmid	year	journal	title	sentence
16936244	2007	Am J Physiol Lung Cell Mol Physiol	Redundant Toll-like receptor signaling in the pulmonary host response to Pseudomonas aeruginosa.	aeruginosa, which lacks the TLR5 ligand flagellin.
16936244	2007	Am J Physiol Lung Cell Mol Physiol	Redundant Toll-like receptor signaling in the pulmonary host response to Pseudomonas aeruginosa.	However, MyD88-dependent pathways, in addition to those downstream of TLR2, TLR4, and TLR5, are required for pulmonary defense against P.
16891416	2006	Proc Natl Acad Sci U S A	Involvement of Toll-like receptor 5 in the recognition of flagellated bacteria.	TLR5 is a sensor for monomeric flagellin, which is a component of bacterial flagella known to be a virulence factor.
16891416	2006	Proc Natl Acad Sci U S A	Involvement of Toll-like receptor 5 in the recognition of flagellated bacteria.	In this study we generated TLR5-deficient mice and investigated the role of TLR5 signaling in the detection of flagellin and antibacterial immune responses to Salmonella typhimurium and Pseudomonas aeruginosa.
16891416	2006	Proc Natl Acad Sci U S A	Involvement of Toll-like receptor 5 in the recognition of flagellated bacteria.	We found that TLR5 is essential for the recognition of bacterial flagellin both in vivo and ex vivo.
16891416	2006	Proc Natl Acad Sci U S A	Involvement of Toll-like receptor 5 in the recognition of flagellated bacteria.	TLR5 contribution to antibacterial host response to i.p.
16891416	2006	Proc Natl Acad Sci U S A	Involvement of Toll-like receptor 5 in the recognition of flagellated bacteria.	These results suggest that flagellin recognition in different organs is mediated by distinct TLR5-expressing cells and provide insights into the cooperation of the TLR5 and TLR4 signaling pathways used by the innate immune system in the recognition of bacterial pathogens.
16825601	2006	Am J Physiol Cell Physiol	Innate immune response in CF airway epithelia: hyperinflammatory?	aeruginosa triggers airway epithelial Toll-like receptor 5 and subsequent NF-kappaB signaling and production and release of proinflammatory cytokines that recruit neutrophils to the infected region.
16824488	2006	Biochem Biophys Res Commun	Human corneal epithelial cells respond to ocular-pathogenic, but not to nonpathogenic-flagellin.	In this study, we investigated the expression of TLR5 in human corneal epithelial cells (CEC), and the functional outcome of TLR5 triggering by flagellins of pathogenic- and nonpathogenic bacteria.

pmid	year	journal	title	sentence
16824488	2006	Biochem Biophys Res Commun	Human corneal epithelial cells respond to ocular-pathogenic, but not to nonpathogenic-flagellin.	The TLR5 protein and TLR5 specific mRNA expression was evident on human CEC.
16824488	2006	Biochem Biophys Res Commun	Human corneal epithelial cells respond to ocular-pathogenic, but not to nonpathogenic-flagellin.	In human corneal epithelium tissues, TLR5 protein was detected at the basal and wing cells of the tissues.
16785551	2006	J Immunol	Toll/IL-1R domain-containing adaptor protein (TIRAP) is a critical mediator of antibacterial defense in the lung against Klebsiella pneumoniae but not Pseudomonas aeruginosa.	To determine the mechanisms associated with Pa-induced neutrophil accumulation, we inoculated mice with a flagellin C mutant of Pa (PaDeltafliC) or purified flagellin, a TLR5 agonist.
16785551	2006	J Immunol	Toll/IL-1R domain-containing adaptor protein (TIRAP) is a critical mediator of antibacterial defense in the lung against Klebsiella pneumoniae but not Pseudomonas aeruginosa.	These novel findings illustrate a pathogen-specific role for TIRAP in pulmonary defense and suggest that TLR5 plays an essential role for Pa-induced neutrophil influx via LIX production.
16547220	2006	J Immunol	Cutting edge: enhanced pulmonary clearance of Pseudomonas aeruginosa by Muc1 knockout mice.	Expression of MUC1 in HEK293T cells attenuated TLR5-dependent IL-8 release in response to flagellin, which was completely ablated when its cytoplasmic tail was deleted.
16439803	2006	Am J Respir Cell Mol Biol	Flagellar activation of epithelial signaling.	Apically presented toll-like receptor 5 responds specifically to bacterial flagellin transducing a number of epithelial proinflammatory signaling cascades, including the induction of Ca2+ fluxes; activation of NF-kappaB, IL-8, and matrilysin; and mucin expression.
16299320	2005	Infect Immun	Roles of specific amino acids in the N terminus of Pseudomonas aeruginosa flagellin and of flagellin glycosylation in the innate immune response.	The Toll-like receptor 5 (TLR5) binding site has been predicted to be in the N terminus of the flagellin molecule.
16299320	2005	Infect Immun	Roles of specific amino acids in the N terminus of Pseudomonas aeruginosa flagellin and of flagellin glycosylation in the innate immune response.	In order to better define the interaction between the N-terminal amino acids of Pseudomonas aeruginosa flagellin and TLR5, site-specific mutations were generated between residues 88 and 97 of P.

pmid	year	journal	title	sentence
16299320	2005	Infect Immun	Roles of specific amino acids in the N terminus of Pseudomonas aeruginosa flagellin and of flagellin glycosylation in the innate immune response.	All the mutations, single or double, in the predicted TLR5 binding region reduced IL-8 signaling to less than 95% of the wild-type flagellin levels, but the single mutation outside the binding region had no effect.
16299320	2005	Infect Immun	Roles of specific amino acids in the N terminus of Pseudomonas aeruginosa flagellin and of flagellin glycosylation in the innate immune response.	The basis of the latter activity is unknown, since the glycosylation sites are found in the D3 domain of flagellins and the TLR5 binding site is located in the D1 domain.
16251478	2006	Am J Physiol Cell Physiol	Innate immune responses of human tracheal epithelium to Pseudomonas aeruginosa flagellin, TNF-alpha, and IL-1beta.	aeruginosa in the airway surface liquid (ASL); columnar cells express toll-like receptor 5 and MyD88, often associated with flagellin-activated cell signaling.
16239509	2005	Infect Immun	Human airway epithelial cells sense Pseudomonas aeruginosa infection via recognition of flagellin by Toll-like receptor 5.	TLR5, TLR2, a combination of TLR1 and TLR2, or a combination of TLR2 and TLR6 responded to PAO1.
16239509	2005	Infect Immun	Human airway epithelial cells sense Pseudomonas aeruginosa infection via recognition of flagellin by Toll-like receptor 5.	aeruginosa strain, strain PAK, activated TLR5 similarly, while the isogenic flagellin-deficient strain PAK/fliC and the flagellum-free bacterium Haemophilus influenzae failed to activate TLR5.
16239509	2005	Infect Immun	Human airway epithelial cells sense Pseudomonas aeruginosa infection via recognition of flagellin by Toll-like receptor 5.	Reverse transcription-PCR was used to probe the presence of multiple TLRs (including TLR5) in primary human airway epithelial cells (HAECs).
16239509	2005	Infect Immun	Human airway epithelial cells sense Pseudomonas aeruginosa infection via recognition of flagellin by Toll-like receptor 5.	Immunostaining with TLR5 antibodies showed that TLR5 was expressed in HAECs and on the apical surface of the human trachea epithelium.
16239509	2005	Infect Immun	Human airway epithelial cells sense Pseudomonas aeruginosa infection via recognition of flagellin by Toll-like receptor 5.	Dominant negative TLR5 specifically blocked the response to P.
16239509	2005	Infect Immun	Human airway epithelial cells sense Pseudomonas aeruginosa infection via recognition of flagellin by Toll-like receptor 5.	These findings demonstrate that the airway epithelial receptor TLR5 senses P.

pmid	year	journal	title	sentence
14607814	2004	Am J Respir Cell Mol Biol	Pseudomonas aeruginosa flagella activate airway epithelial cells through asialoGM1 and toll-like receptor 2 as well as toll-like receptor 5.	There was evidence for participation of asialoGM1 and TLR2 as well as TLR5 in the response to flagella, and increased asialoGM1 correlated directly with increased signaling.
14607814	2004	Am J Respir Cell Mol Biol	Pseudomonas aeruginosa flagella activate airway epithelial cells through asialoGM1 and toll-like receptor 2 as well as toll-like receptor 5.	TLR2 DN or TLR5 DN mutations inhibited interleukin-8 induction by 78% and 35%, respectively (P < 0.001 for each).
14607814	2004	Am J Respir Cell Mol Biol	Pseudomonas aeruginosa flagella activate airway epithelial cells through asialoGM1 and toll-like receptor 2 as well as toll-like receptor 5.	The participation of TLR2 as well as TLR5 was confirmed in Chinese hamster ovary cells transfected with either human TLR2 or TLR5 in which flagella activated a nuclear factor-kappaB-luciferase reporter to the same extent.
14607814	2004	Am J Respir Cell Mol Biol	Pseudomonas aeruginosa flagella activate airway epithelial cells through asialoGM1 and toll-like receptor 2 as well as toll-like receptor 5.	Flagella signaling in airway cells can be initiated by interactions with asialoGM1 and TLR2 as well as by activation of TLR5.
14507868	2003	Invest Ophthalmol Vis Sci	Toll-like receptor 5-mediated corneal epithelial inflammatory responses to Pseudomonas aeruginosa flagellin.	TLR5 localization in human cornea was analyzed by immunohistochemistry using anti-TLR5 antibody.
14507868	2003	Invest Ophthalmol Vis Sci	Toll-like receptor 5-mediated corneal epithelial inflammatory responses to Pseudomonas aeruginosa flagellin.	Anti-flagellum antiserum and anti-TLR5 antibody were used for functional blocking of flagellin stimulation and TLR5 activation.
14507868	2003	Invest Ophthalmol Vis Sci	Toll-like receptor 5-mediated corneal epithelial inflammatory responses to Pseudomonas aeruginosa flagellin.	Presence of flagellum- or TLR5-antisera in culture medium attenuated flagellin-induced IkappaB-alpha phosphorylation and degradation as well as IL-6 and -8 production.
14507868	2003	Invest Ophthalmol Vis Sci	Toll-like receptor 5-mediated corneal epithelial inflammatory responses to Pseudomonas aeruginosa flagellin.	CONCLUSIONS: Flagellin of Gram-negative pathogens such as PA contributes to the inflammatory responses of corneal epithelium in a TLR5-NF-kappaB signaling pathway-dependent manner.
12837800	2003	J Bacteriol	Structural study of binding of flagellin by Toll-like receptor 5.	In order to predict the binding regions within the complex formed by Toll-like receptor 5 (TLR-5) and flagellin, a complementary hydropathy between the two proteins was sought.
