A GSE97036: six donors, four arsenic levels (24 repeated pairs)
TLR5
MUC1
NFKB2
CXCL8
IL6
24/24 pairs down
6/6 donor means down
21/24 pairs down
6/6 donor means down
0/24 pairs down
0/6 donor means down
0/24 pairs down
0/6 donor means down
1/24 pairs down
0/6 donor means down
Grey: 24 repeated donor–arsenic pairs; blue points: six donor means; interval: 95% t interval across the six donors

Within-donor PA minus control (VST expression)
B TLR5 and MUC1 occupy different states rather than one fixed module
Macrophage WT, 450 min
Macrophage CF, 450 min
Persistent Calu-3, 120 h
Persistent Calu-3, 24 h
Macrophage WT, 150 min
Macrophage CF, 150 min
Primary HBE
Corneal epithelium
Lung explant
Descriptive cross-model comparison; cell type, species, time and platform differ
MUC1 effect (log2 fold-change)
TLR5 effect (log2 fold-change)
